Quizzes were part of seven of the eight modules of the course. After filtering quiz responses for just course completers to have a valid and consistent sample size (as many students attempted some quizzes but not others), below is a plot of the average grade percent (as a decimal) per quiz.

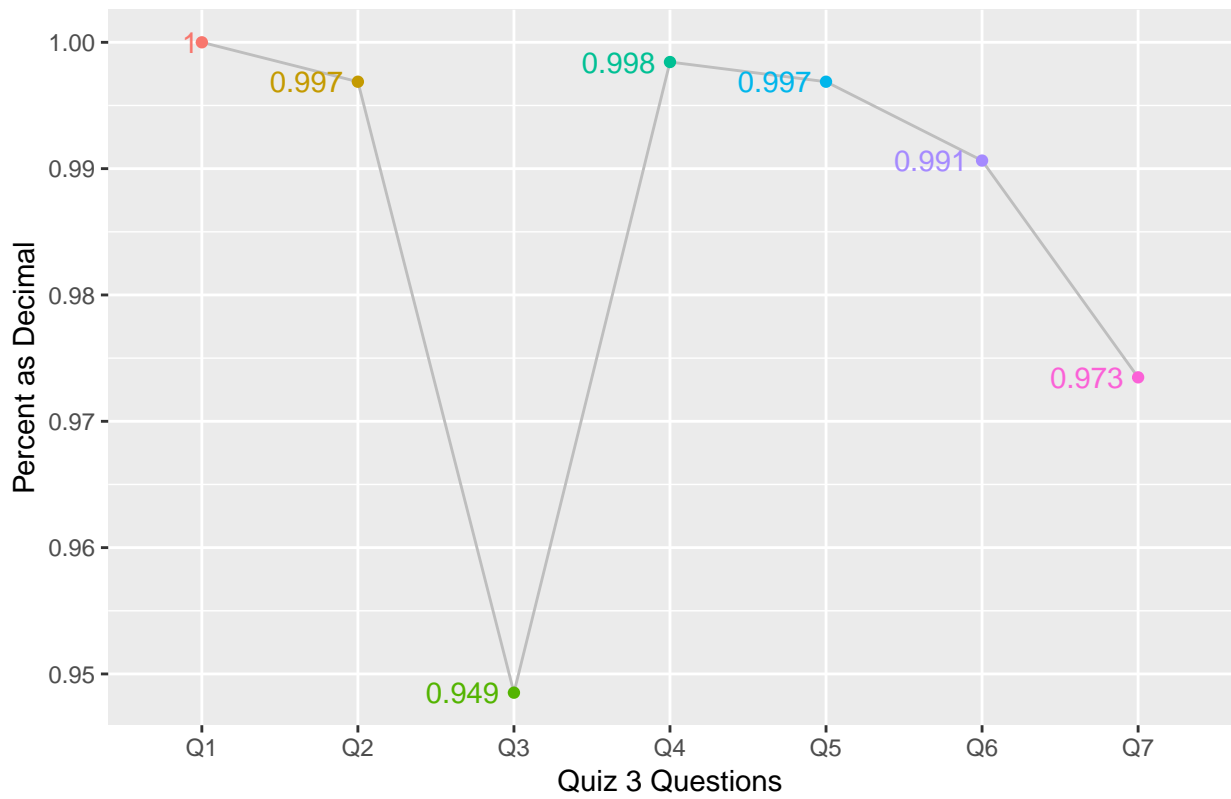

It is helpful to look at individual quiz results, especially to see if certain questions were more difficult for students than others. Such situations can be a sign that either the course content did not appropriately prepare the student or that the question may not be appropriately designed. Again, after filtering quiz responses for just course completers to have a valid and consistent sample size, below are plots per quiz showing the percent (as a decimal) of students answering each question correct.
